Art Unit: 2665

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-21, drawn to TDM to TDM-MCM transformation in satellite system, classified in class 370, subclass 321.
 - II. Claims 22-27, drawn to broadcast program transmission in time diversity communication system, classified in class 375, subclass 347.
 - III. Claims 28-43, drawn to broadcast program distribution in satellite system, classified in class 725, subclass 71.
 - IV. Claims 44-51, drawn to a Viterbi Convolution Decoder at a receiver, classified in class 375, subclass 341.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II, III and IV have separate utility such as program broadcasting in time diversity system, broadcast program distribution system and a Viterbi Convolution Decoder, respectively. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
